

OpenSpec + Superpowers — the workflow

Spec-first delivery, bound upstream across **claude** · **codex** · **opencode** · **pi**. Roadmap in Linear. Loops per change (🔄).

Linear · roadmap OpenSpec · spec & lifecycle Superpowers · execution adversarial review enforcement hook ship

One idea: specs are the source of truth; work happens as reviewed changes to the spec. · **specs/** = current truth **changes/archive/** = history

Linear = what's next.

OpenSpec owns the spec & its lifecycle — it does **not** provide review, security, tests, or release; those stay in Superpowers + the gate set.
